OCR/VLM Prompt

MONDAY 25 MAY 2026

- 9:00 Registration and visit to the Computer Vision Center
- 10:30 Transport to Vall de Núria
- 14:00 Lunch
- 15:00 SSDA Introduction
- 15:30 Introduction to Document Analysis and Vision & Language
- 17:00 Check in
- 18:30 Free time
- 20:30 Dinner

TUESDAY 26 MAY 2026

- 8:30 Breakfast
- 9:00 Student Presentations
- 10:30 Coffee
- 11:00 Trends on Truthworthy Doc Analysis | Maura Pintor
- 12:30 Lab Session - VLMs + Agents | Marcelo Sanchez
- 14:00 Lunch
- 15:00 When Historical Demography Met Pixels: Construction and Analysis of Population Data from the Past | Joana M. Pujades
- 15:30 Reshaping Access to the Past: Computer Vision and RAG in Historical Archive | Gerard Corbella
- 16:30 Coffee
- 17:00 Student Poster Session
- 18:30 Free time
- 20:30 Dinner

WEDNESDAY 27 MAY 2026

- 8:30 Breakfast
- 9:00 Hiking
- 12:30 Generating and Editing Visually Rich Documents. | Silvia Cascianelli
- 14:00 Lunch
- 15:00 Learning on Graphs: GNNs in Document Analysis | Andreas Fischer
- 16:30 Coffee
- 17:00 Lab Session - GNNs
- 18:30 Open Lab (I): Agentic Visual Question Answering on a large Document Collection
- 20:30 Dinner

OCR/VLM Prompt

You are given an image containing the schedule of a scientific event. The event may last for several days.

Recreate the schedule as a JSON schema following the format:

```
{
  day1: [
    {start_time1: description1},
    {start_time2: description2},
    ...]
  day2: {...}
}]
)""")
```

OCR/VLM Prompt

```
{
  "Monday, 25 May 2026": [
    {
      "9:00": "Registration and visit to the Computer Vision Center"
    },
    {
      "10:30": "Transport to Vall de Núria"
    },
    ...
  ],
  "Tuesday, 26 May 2026": [
    ...,
    {
      "11:00": "Trends on Truthworthy Doc Analysis | Maura Pintor"
    },
    ...
  ]
}
```

Schema conversion

```
{
  "Monday, 25 May 2026": [
    {
      "9:00": "Registration and visit to the Computer Vision Center"
    },
    {
      "10:30": "Transport to Vall de Núria"
    },
    ...
  ],
  "Tuesday, 26 May 2026": [
    ...,
    {
      "11:00": "Trends on Truthworthy Doc Analysis | Maura Pintor"
    },
    ...
  ]
}
```

Schema conversion

You are given a schedule in JSON format. Transform it into a list of individual json objects, each one following the next schema:

```
{
  "title": main title of the event (string),
  "start": start time of the event (string following theISO 8601 extended
format),
  "end": end time of the event (string following theISO 8601 extended
format),
  "location": physical location,
  "description": any other available information (string)
}
```

If no end time is given, infer it from the start time of the following event.

Schema conversion

```
{  
  "title": "Another lecture about knowledge  
graphs",  
  "start": "2026-05-26T 9:00:00",  
  "end": "2026-05-26T 10:30:00",  
  "location": "Main room",  
  "description": "Speaker: Elon Musk"  
}
```

Calendar integration

Deterministic check via Pydantic:

- date must be a valid ISO date string: YYYY-MM-DD
- day_name must be one of Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday
- start_time must be HH:MM
- title must be a non-empty string

Multi-slot checks:

- Time monotonicity

Deterministic parsing into .ics format:

DTSTART<start_time>

DTEND:<end_time>

DESCRIPTION:<The retrieved additional information goes here>

...

Demo time !
